1. Russell Investments claims compliance with the Global Investment Performance Standards (GIPS®) for FMPs and has prepared and presented this report in compliance with the GIPS standards for FMPs.

2. Russell Investments Limited is a privately owned asset management company registered in the UK. It provides fiduciary management services to UK and Irish pension schemes that are categorised as Full Fiduciary Management Clients.

3. The composite includes all schemes with a return target of the liability plus between 1.5% and 2.5% (including 2.5%), with an unconstrained hedging constraint. Gilt repurchase agreements and/or interest rate swaps are used to extend the duration of scheme assets to match liabilities greater than 15 years. As of 31 December 2022, there were 12 schemes in the composite. A list of composite risks is available upon request.

4. Composite Relative Net Return to Full Liabilities: Composite relative net returns are calculated as the difference between the scheme net return and the full liabilities benchmark of the individual scheme used to report performance to the client. The liabilities benchmark is calculated by using either the full liability cash flows, a liability proxy benchmark constructed from gilts or swaps, or if neither of these exist, a gilt of similar duration to the liabilities. Some of the schemes have a performance track record using liability proxy benchmarks and gilts of similar duration to the liabilities. The level of volatility risk reported will typically be lower when a liability proxy benchmark or gilt of similar duration to the liabilities has been used.

5. Composite Relative Net Return to Hedge Ratio-Adjusted Liabilities: Composite relative net returns are calculated as the difference between the scheme net return and the hedge ratio-adjusted liability benchmark of the individual scheme used to report performance to the client. The hedge ratio-adjusted liability is calculated by including cash for the proportion of liabilities where interest rate hedging is not allowed and including the full liabilities for the proportion of the liability where hedging is allowed. The 3M GBP Libor cash rate is used where interest rate hedging is not allowed.

6. Scheme net returns are net of actual fees and costs, including transaction costs, custody, and other administrative fees, and investment management fees. Information about fees and other costs is available upon request. Returns are net of non-reclaimable withholding taxes. All returns and assets are presented in GBP.

7. The composite was created in August 2018. The composite inception date is 31 August 2018.

8. The list of composite descriptions is available upon request.

9. Policies for valuing investments, calculating performance, and preparing GIPS Composite Reports are available upon request.

10. The three-year annualised ex post standard deviation measures the variability of monthly composite relative net returns relative to the benchmark over the preceding 36 months.

11. Dispersion of net returns relative to full liabilities and hedge adjusted liabilities is not presented where there are three or fewer schemes in the composite for the entire year and the dispersion information would not be meaningful.

12. A range of sub-advisors were used for investments throughout the period covered by this Composite Report.

13. Schemes where a third party provides investment advice and Russell Investments manages the total portfolio to achieve the agreed investment objectives are included.
