Russell Investments
Emerging Markets
Equity Fund

Seizing the full range of emerging opportunities
Fund objective

The Fund aims to achieve long term growth by investing in the shares of companies in emerging markets or companies that carry out a majority of their business in emerging markets. It employs a multi-strategy investments approach and is broadly diversified across countries, sectors, investment styles and individual stocks.

The Fund aims to achieve an annual return of 2.0% over the MSCI Emerging Markets Net Index (gross of fees) with an expected tracking error of 4.5%. We use a disciplined investment process to design, construct and manage the Fund. It is designed using our strategic beliefs for this asset class, derived from extensive research and experience. It is constructed by combining skillful third-party specialist investment managers with factor strategies and overlays. We manage the resulting asset mix dynamically, using our tactical insights and advanced systems to manage risk and capture opportunities.

What do you need for success in emerging markets?

Emerging markets have the capacity to be the standout performer in a prospective low return environment. However, the asset class has grown substantially since it was defined 30 years ago and with this growth has come significant complexity. In order to succeed, investors need to understand a diverse range of political, social and economic market drivers and translate these in terms of the impact on countries, currencies, sectors and stocks. This is not an easy task.

The potential opportunity set in emerging markets has become so broad and diverse that it is now very hard to capture. Investors can under-estimate the sheer scale of the task and thereby miss out on the outsized returns presented by this inefficient asset class. A well-constructed multi-strategy multi-manager fund that combines complementary investment strategies is the most effective way to exploit the breadth of opportunity on offer. We can smooth the ride in this volatile asset class by dynamic management of the strategy and factor exposures in the fund.

Russell Investments
Emerging Markets Equity Fund

The Fund aims to address the significant challenges facing emerging markets investors. The investable universe is extremely broad, covering a diverse range of geographies, economies, industry sectors and market capitalisations. Faced with a daunting task, it is necessary to employ all the tools at your disposal. It is not enough simply to hire good managers. You also need to combine them effectively and manage the mix actively through time, taking into account the trade-off between risk and reward. We approach the task from first principles using:

**WELL-FOUNDED STRATEGIC BELIEFS**
There are certain factor exposures that over the course of a market cycle will deliver higher returns than the broad market. We believe that growth and value are dominant and we tilt the strategy towards these factors over the long term.

**BEST-IN-CLASS MANAGERS FROM AROUND THE WORLD**
We employ an open-architecture approach using best-in-class investment manager strategies from around the globe, giving investors access to a truly unconstrained breadth of managers.

**SMART BETA FACTOR STRATEGIES**
We incorporate customised exposures directly managed by Russell Investments that allow our portfolio managers to reflect our strategic and dynamic insights in an active manner.

**DYNAMIC MANAGEMENT TO EXPLOIT MARKET INEFFICIENCIES**
We leverage the insights both of Russell Investments’ team of strategists and those of the managers that we employ, together with external research sources and our own tactical factor views, in order to take advantage of market opportunities.

**TIMELY AND EFFECTIVE IMPLEMENTATION**
Our Implementation Services team employs sophisticated techniques to transition between managers and strategies, minimise trading costs and manage liquidity in order to ensure that our investment insights are captured efficiently.

**MANAGEMENT OF TOTAL PORTFOLIO RISK**
We use customised risk analysis tools to understand, evaluate and manage exposures within the strategy. We target our preferred positions and minimise unwanted risks. Full visibility and control makes this possible.

*By combining these components, the Fund has achieved meaningful and consistent outperformance of the major broad-based emerging markets indices.*
Combining the strategies

The Fund’s asset mix combines third-party specialist managers with smart beta factor strategies that are designed, constructed and managed by Russell Investments. As at 31 December 2018, the Fund incorporated five managers and an overlay strategy designed to manage country risk.

Key benefits

Global: Puts together a team of global specialist managers and strategies to work for you.

Performance consistency: Provides attractive risk adjusted performance when compared to traditional investment approaches employed in emerging markets.

Access to experts: Uses a best-in-class approach to identify the leading specialist third-party managers in each style segment. Through our intensive research process we identify the best specialists and gain valuable insights into the success of different emerging markets equity strategies. Our extensive experience and relationships allow us to select niche specialist capabilities and customise strategies to complement our portfolios.

Capacity: Hires managers that have scope to succeed. Single-manager propositions operating in emerging markets are typically capacity constrained and their performance can deteriorate when they absorb too much cash-flow. Our best-in-class approach is well positioned to adapt to this challenge, constantly looking for new skilled strategies with capacity.

Dedicated frontier market and small cap exposure: Accesses significant active management opportunity in segments of the asset class with increasing breadth and higher levels of inefficiency.

Targeted exposures: Invests in customised segregated mandates identified through our research, rather than off-the-shelf products, thereby taking full advantage of each manager’s key strengths and retaining full control of the their overall positioning.

Integrated: We employ a straightforward but powerful process based on business cycle, market valuation and investor sentiment factors (Cycle, Value and Sentiment or CVS), together with a consistent methodology to design, construct and manage portfolios (DCM). Our CVS and DCM approaches link the work of our portfolio management, research and strategy teams, providing them with a common language and analytical framework. This allows our teams to combine top-down and bottom-up research, to generate more penetrating insights and to maintain constant market awareness. Importantly, this integrated capability underpins our ability to allocate the Fund’s assets dynamically in the light of changing markets and new opportunities.

Nimble: Real-time management and powerful analytics help manage risk exposures, make for greater agility in a constantly changing environment, and create flexibility to respond to what’s going on in the marketplace.

Governance: The Fund’s performance includes time-consuming and expensive market set-up costs and the cost of all manager changes. We take away the need for beauty parades, allowing investors to focus on more critical governance aspects. In addition, Russell Investments’ Manager Oversight Team undertakes comprehensive, on-site due diligence reviews for all managers, thereby reducing operational risks.

Why Russell Investments?

We believe Russell Investments has a crucial advantage. We can combine our capital markets insights, manager research expertise, tactical asset allocation capabilities and factor capture skills in one integrated and dynamic process, on a truly global basis. We don’t just find a good manager. We look at the manager’s strategy and see whether it is appropriate for the current market environment, how it interacts with the overall portfolio, and whether the timing is right to invest now. Additionally, we look at the best way to implement our views – should we do this actively, passively or through smart beta? Lastly, we constantly re-evaluate each manager’s place in the asset mix in the light of market movements. The emerging markets universe is extremely broad, and it is rare to find the multitude of skillsets required for success in just one manager. With thousands of stocks available for investment across the asset class, it is not possible to be an expert in them all. Our 30 years of experience researching managers and styles, and understanding country and sector return drivers, allows us to rapidly deploy world-class talent in a nimble, targeted and effective manner in order to exploit the multitude of opportunities provided by this volatile and inefficient asset class.
