Synopsis

While overheated tech stocks and U.S. election uncertainty present near-term headwinds, we believe positive COVID-19 vaccine developments, dovish central banks and an ongoing economic recovery should allow equity markets to push higher.

Key market themes

The global market is in the early recovery phase of the business cycle following the COVID-19 recession. This implies an extended period of low-inflation, low-interest-rate growth: an environment that usually favors equities over bonds. But after such a rapid rebound, an equity market pullback would not be surprising. Tech stock valuations are elevated, and the U.S. elections create uncertainty around tax changes, government regulations and the re-escalation of China-U.S. trade tensions. Beyond this, we believe the market looks set for a rotation away from tech/growth leadership toward cyclical/value stocks. This also implies a rotation toward non-U.S. stocks, with Europe and emerging markets likely the main beneficiaries, in our opinion.

Our cycle, value and sentiment investment decision-making process scores global equities as slightly expensive, sentiment as neutral and the cycle as supportive. This leaves us neutral on the near-term outlook, but moderately positive for the medium-term, with slightly expensive valuations offset by the positive cycle outlook.

In the U.S., the move by the Federal Reserve (the Fed) to target average inflation is a significant shift. It should lengthen the expansion and delay the day of reckoning for equity markets from higher interest rates. Key uncertainties include the upcoming November presidential election between Donald Trump and Joe Biden. We believe a contested election, with destabilizing implications for markets, is becoming a risk. A Trump victory would likely benefit U.S. stocks (i.e., tax hikes averted, more protectionism), while a Biden victory would probably benefit non-U.S. equities (i.e., more harmonious foreign and trade relations). Another main risk is a second wave of coronavirus infections that causes renewed lockdowns. At this time, however, we expect that a second round of meaningful lockdowns will be avoided.

In Europe, economic indicators have rebounded following the easing of lockdowns. While infections have been rising, hospitalization and death rates remain low due to the shift in infections to younger age groups as well as more effective treatments. The region’s exposure to financials and cyclically sensitive sectors such as industrials, materials and energy gives it the potential to outperform in the second phase of the recovery, when economic activity picks up and yield curves steepen.

In the UK, Brexit uncertainty dominates the outlook. There is a year-end deadline for a European Union-UK trade deal, but negotiations are at a stalemate. Our assumption is that a deal will be reached on at least a bare-bones free trade agreement, but the risk of a hard exit is uncomfortably high. Brexit uncertainty has been reflected in the FTSE 100 Index, which as of Sept. 16 has been the worst performer of the major developed stock indices this year. We like the value in the UK market on a longer-term basis.

The Chinese economy has seen significant improvement since the COVID-19 crisis, with many indicators now pointing to growth over the year. Fiscal policy is set to remain very supportive through the rest of the year, and we expect that credit creation will be solid.

The Japanese economy continues to lag the recovery of other major regions, with the services sector being particularly disappointing. Even with the continuation of Abenomics under new Prime Minister Yoshihide Suga, as well as the potential for further stimulus, we expect that Japan will remain a laggard in the recovery, due to constrained monetary policy and deflationary dynamics.

In Australia, fiscal and monetary policy should remain very supportive. The government is set to announce new measures at the October budget, and we think that the Reserve Bank of Australia will keep rates steady.

In Canada, consumer spending data, along with recent trends in housing and employment, suggests the economic recovery has commenced. We expect fiscal and monetary policies to remain stimulative for some time to come.
Economic views

FISCAL STIMULUS
While government debt levels for developed economies are likely to increase by around 15% of gross domestic product (GDP) on average, we believe that fiscal austerity and tighter monetary policy are still some years away.

FED FORECAST
We don’t expect U.S. inflation overshoes (and therefore, Fed rate hikes) to become a serious risk until 2023.

EUROPEAN GROWTH
Europe’s recovery should continue over the coming quarters, as the region is more exposed to global trade than the U.S. and likely to benefit more from a rebound in Chinese demand.

TRADE
Despite the escalation in trade tensions between the U.S. and China, we think the phase one trade deal will remain intact through the U.S. presidential election.

RECOVERY
We believe that the global recovery from the recession will lead to a long period of low-inflationary growth, supported by monetary and fiscal stimulus.

Asset class views

Equities: Preference for non-U.S. equities
We prefer non-U.S. equities to U.S. equities. We believe that the second stage of the post-coronavirus economic recovery should favor undervalued cyclical value stocks over expensive technology and growth stocks. Notably, other major markets are overweight cyclical value stocks, relative to the U.S.

We like the value in emerging markets equities. China’s early exit from COVID-19 lockdowns and recent stimulus measures should benefit emerging markets more broadly.

Fixed income: Bonds universally expensive
We see government bonds as universally expensive. Low inflation and dovish central banks should limit the rise in bond yields during the economic recovery from the lockdowns. We have a neutral view on high-yield and investment-grade credit.

Currencies: U.S. dollar should weaken during recovery
Given its counter-cyclical behavior, we expect the U.S. dollar to weaken during the recovery. The dollar typically gains during global downturns and declines in the recovery phase. The main beneficiaries should be the economically sensitive commodity currencies—the Canadian dollar, the New Zealand dollar and the Australian dollar. We see the euro and British sterling as undervalued.

Please remember that all investments carry some level of risk, including the potential loss of principal invested. They do not typically grow at an even rate of return and may experience negative growth. As with any type of portfolio structuring, attempting to reduce risk and increase return could, at certain times, unintentionally reduce returns.

Keep in mind that, like all investing, multi-asset investing does not assure a profit or protect against loss.

Forecasting represents predictions of market prices and/or volume patterns utilizing varying analytical data. It is not representative of a projection of the stock market, or of any specific investment.

Investment in global, international or emerging markets may be significantly affected by political or economic conditions and regulatory requirements in a particular country. Investments in non-domestic markets may involve risks of currency fluctuation, political and economic instability, different accounting standards and foreign taxation. Such securities may be less liquid and more volatile. Investments in emerging or developing markets involve exposure to economic structures that are generally less diverse and mature, and political systems with less stability than in more developed countries.

Currency investing involves risks including fluctuations in currency values, whether the home currency or the foreign currency. They can either enhance or reduce the returns associated with foreign investments.

Investments in non-domestic markets can involve risks of currency fluctuation, political and economic instability, different accounting standards and foreign taxation.

Bond investors should carefully consider risks such as interest rate, credit, default and duration risks. Greater risk, such as increased volatility, limited liquidity, prepayment, non-payment and increased default risk, is inherent in portfolios that invest in high yield (“junk”) bonds or mortgage-backed securities, especially mortgage-backed securities with exposure to sub-prime mortgages. Generally, when interest rates rise, prices of fixed income securities fall. Investment in non-domestic and emerging market securities is subject to the risk of currency fluctuations and to economic and political risks associated with such foreign countries.

Performance quoted represents past performance and should not be viewed as a guarantee of future results.

The FTSE 100 Index is a market-capitalization weighted index of UK-listed blue chip companies. Indexes are unmanaged and cannot be invested in directly.
