

# Keep calm and stay invested

3 guidelines to keep in mind in volatile markets

We are faced with headlines every day that inevitably cause us to think about bailing on investments when markets get jittery. Whether it's a global pandemic, trade war talks or a looming election, the news can be very distracting.

It's important to remember to stick to your long-term financial plan and avoid emotional, headline-driven decisions. To help ease some of the angst, consider these three guidelines to help you keep things in perspective, and stay calm and invested.

On days where headlines are alarming and investors like you are wondering what's happening to your savings, it's more crucial than ever to focus on the bigger picture and your long-term goals. At Russell Investments, we believe that investors can avoid missteps that can lead to bigger shortfalls than they are already facing. Recent events have served as a reminder of this. Investing can be uncomfortable for a lot of people, but does it have to be?

## 1. No one (really) can time the market

Even the most sophisticated investors will tell you that it is virtually impossible to accurately predict the market's short-term moves. In fact, mistiming can be disastrous to investment returns. In a low growth/lower return environment, what does this mean for investors saving for retirement? In today's reality, where investors are more likely than ever to face retirement income gaps, they can't afford to miss out on returns.

We believe in the power of being invested over the long-term. Not being invested (strategy #5 in Exhibit 1 on page 2), and simply leaving money in cash, yields by far the worst ending wealth of any investment option. Even investing your money on the worst days of the market (strategy #4) is still more favorable than not investing at all.

## 2. Nothing, especially volatility, lasts forever

There have been many times throughout history where markets have declined—but these relatively short periods are most often followed by the most favorable returns. Unfortunately, due to loss aversion\*—one of the principles of behavioral economics—people tend to remember the bad twice as much as the good<sup>1</sup>. This means that despite having experienced the longest bull run in history, even a few bad days in the markets can cause investors to rethink their long-term investment strategy.

Since 1926, stocks have more often finished the calendar year in positive rather than in negative territory—in fact, 73 percent of the time, as evidenced in Exhibit 2 on page 3. It's extremely challenging to predict whether a calendar year return will be positive or negative.

*“In the financial markets, hindsight is forever 20/20, but foresight is legally blind. And thus, for most investors, market timing is a practical and emotional impossibility.*

Benjamin Graham,  
The Intelligent Investor

\*Loss aversion is people's tendency to prefer avoiding losses to acquiring equivalent gains

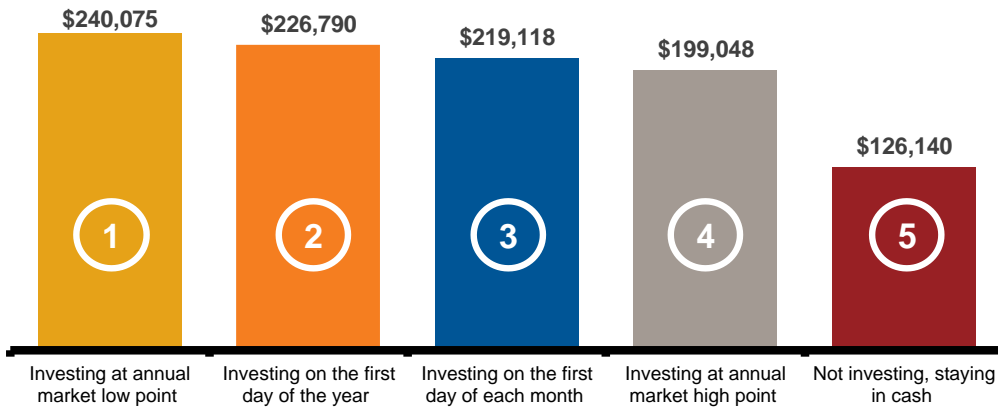

## Exhibit 1: Be invested, stay invested

Focusing on long-term outcomes

1 Perfect timing	2 First of year	3 Dollar cost averaging	4 Perfectly wrong timing	5 Holding cash, no investment
This strategy is ideal, yet implausible.	Investing your money for the most amount of time can yield the most gain in most market environments	A popular rules-based strategy. May help investors cope with uncertain or volatile markets.	Despite bad timing, assets invested in the market may grow faster than if left in cash.	Holding cash too long can result in the least growth of wealth.

### Hypothetical ending wealth after investing \$12,000 per year for 10 years

Period ending February 29<sup>th</sup> 2020

Note that one year represents a 12-month period February 28th or 29th (depending on leap year).

Assumes a one-time investment of \$12,000 per year into a hypothetical balanced portfolio with no withdrawals between February 28th 2010 and February 29, 2020.

Source: Russell Investments.

Cash return based on return of \$12,000 invested each year in a hypothetical portfolio of 3-month Treasury bonds represented by the FTSE Treasury Bill 3-month Index without any withdrawals between February 28th, 2010 and February 29th, 2020.

### 3. Diversification matters

Working with your financial advisor, having a robust strategic asset allocation with regular rebalancing, or investing in a professionally managed multi-asset solution, can potentially enhance returns, but more importantly, help manage volatility. Periods of panic provide an equally good opportunity to ensure that investors have the right attitude when it comes to risk. Russell Investments has consistently advocated for investors to consider a global multi-asset approach to investing. We believe doing so puts investors on a smoother path toward meeting goals, while also helping to manage risk. Put simply, investors diversify because the future is uncertain, and no one can predict with certainty which asset class will win or lose over the upcoming cycles.

**“The only investors who shouldn’t diversify are those who are right 100% of the time.”**  
John Templeton<sup>2</sup>

## Exhibit 2: Historically it has paid to own stocks

Calendar year S&P 500® Index returns, 1926-2019

**73% of the time, U.S. equity market has posted calendar year returns above zero**

Represented by the S&P 500® Index from 1926-2019.

Index returns represent past performance, are not a guarantee of future performance, and are not indicative of any specific investment. Indexes are unmanaged and cannot be invested in directly.

## The bottom line

While navigating uncertainty and extreme market volatility is difficult, it's important to keep the big picture in mind and stay focused on your long-term goals. Historically, over the long term, markets have been positive more often than negative, as shown in Exhibit 2. Volatility is a reality, even in positive markets, and diversification is a tool every investor can rely upon to help withstand market corrections. Rather than reacting to volatility and trying to time short-term market gyrations, Russell Investments believes investors should base their investment strategy on personal long-term goals, time horizon, financial circumstances and risk tolerance, not on what markets are doing at a given moment. Staying invested has generally been a better option. Economic uncertainty will always be a cause for anxiety, so it's important to remember these guidelines and to speak with your financial advisor when the markets get choppy.
